Epsilon

Epsilon–Academia AI Collaboration

We create data-driven, enriched customer experiences focused on real people.

When you join us, we'll create something EPIC together. Epsilon is a global data, technology and services company that powers the marketing and advertising ecosystem. For decades, we've provided marketers from the world's leading brands the data, technology and services they need to engage consumers with 1 View, 1 Vision and 1 Voice. 1 View of their universe of potential buyers. 1 Vision for engaging each individual. 1 Voice to harmonize engagement across paid, owned and earned channels.

Our Approach

"Epsilon's comprehensive approach is an example of a vendor with integrated marketing capabilities and advertising functions. This martech-adtech integration enables the company to develop data-driven insights, which now fuel additional channels of engagement."

of the top 100 retailers

97
top travel companies

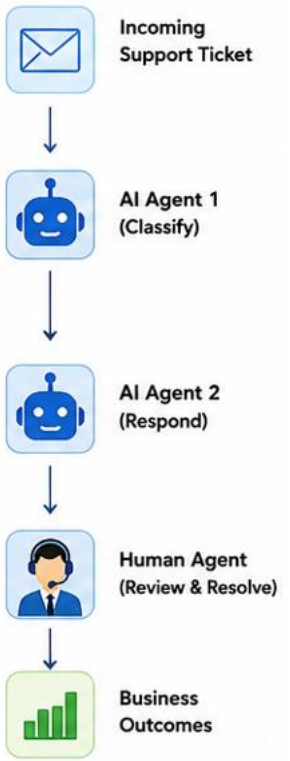

8
of the top 10 pharmaceutical companies

Our clients

Anheuser-Busch · gm · Walgreens · GSK · TOYOTA · NISSAN · Unilever · Disney · Marriott HOTELS · RESORTS · SUITES · BANK OF AMERICA

Business Ask – AI-Powered Client Support Automation (Multi-Agent Framework)

Problem Statement –

- Client teams spend significant effort manually triaging incoming tickets and drafting initial responses.
- This creates delays, increases operational costs and limits teams' ability to focus on high-value customer interactions.

Proposed Solution - Deploy a Multi-Agent AI Framework to automate the first level of Client ticket processing.

Agent Workflow –

Agent 1 – Ticket Classification

1. Reads incoming client tickets
2. Identifies intent and categorizes requests (Ex – Access MGMT, Update Profile, Compliance deletes, Report extract, etc..)
3. Routes tickets to the appropriate queue

Agent 2 – Response Generation

1. Uses identified category and ticket context
2. Generates a standardized, policy-compliant first response
3. Provides recommended next steps and resolution path

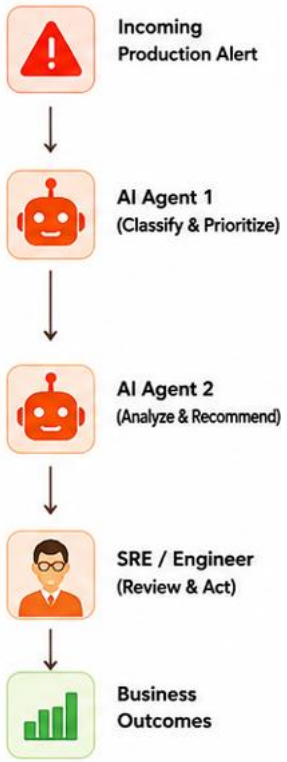

Human Agent -

1. Reviews AI-generated response (optional)
2. Focuses on complex exceptions and escalations

Business Impact - Operational Efficiency, Customer Experience, Cost Optimization.

Business Ask – AI-Powered Production Alert Management (Multi-Agent Framework)

Problem Statement –

- Client teams spend significant time monitoring alerts, analysing incidents, identifying root causes and coordinating responses across multiple systems and teams.
- High alert volumes, manual triage, and delayed response times increase operational costs, impact SLAs, and elevate business risk.

Proposed Solution - Deploy a Multi-Agent AI Framework to automate the initial production alert analysis and incident response workflow.

Agent Workflow –

Agent 1 – Alert Classification & Prioritization

1. Monitors incoming alerts from monitoring tools and observability platforms
2. Identifies alert type (Application, API, Database, Infrastructure, Network, Security, etc.)
3. Determines severity, business impact, and priority. Correlates duplicate or related alerts to reduce noise

Agent 2 – Incident Analysis & Recommendation

1. Reviews logs, metrics, historical incidents and known error patterns.
2. Identifies probable root cause. Generates remediation recommendations and runbook actions
3. Drafts incident communications for support teams and stakeholders

Human Agent -

1. Reviews AI recommendations, executes remediation for complex incidents
2. Focuses on high-impact production issues and preventative improvements

Business Impact - *Operational Efficiency, Service Reliability, Cost Optimization, Customer & Business Experience.*
